

**CII – CFI Workshop**  
**“Geo-synthetics Applications in Infrastructure Construction : Emerging Trends in India”**  
Mumbai, September 2016

Confederation of Indian Industry (CII) and Construction Federation of India (CFI) are jointly organizing a Workshop on “Geo-synthetics Applications in Infrastructure Construction : Emerging Trends in India” at Mumbai on September 2016.

The Workshop is being held in the backdrop of the advice received from the central ministries overseeing infrastructure construction activities, particularly, Ministry of Road Transport & Highways (MoRTH) that the Government of India aims to promote and accelerate the usage of Geo-synthetics and therefore efforts are needed to create adequate awareness amongst the civil contractors, civil engineering consultants and associated professionals. Ministry of Textile is, in fact, incentivizing their usage by providing subsidy.

The workshop aims to create awareness about various facets of the geo-synthetics applications including a broad technical overview, standards, advantages, etc. in infrastructure construction to the community of the civil contractors, consultants and project engineers. The presentations by leading experts and discussions would be greatly helpful in being prepared to adopt a change that is bound to happen.

**Full details about Programme, Registration and Sponsorship Opportunities will be uploaded shortly.**
